<b>We invite interested parties to provide feedback on the Roadmap.</b>	<p>Confidential? – N</p> <p>I think this is absolutely ridiculous that the tv spectrum is being eroded again when it belongs to the public for public broadcasting. We as an industry get more and more interference issues with 4g and 5 g and the poor public having to pay more money for interruption to service that is not their fault.</p> <p>This all seems like a money grabbing exercise for needed funds, is this really fair on the public and are you now going to cause more unnecessary costs to the general public as well those of us that have to do warranty work for recently installed equipment. Let alone the poor elderly people that are going to get overcharged for work because the tv doesn't work properly.</p> <p>Has there been any consultation with any of the governing bodies i.e. CAI for interference issues or is this being done in spite of everyone who actually knows anything about interference issues.</p>
