

Dear Sir/Madame

My name is Gareth Sizer, the head of the sound department at Mamma Mia! London.

Having read BEIRG's response to the future use of the 700Mhz band I whole heartedly support their claims.

We at Mamma Mia! Currently use 16 frequencies within the 700Mhz Band and another 8 in channel 48 which borders the proposed 694Mhz cut off. To move these frequencies elsewhere would have massive implementations for us.

To quote the report "In any production uninterrupted audio is critical. Consequently, any interference that causes a wireless audio failure has severe repercussions for both the production and the audience alike"

It is imperative for us to have a "clean" audio for our show and to move into a world where there seems to be uncertainty as to whether we can provide this to our audiences is very worrying.

We all hope as an industry that you all take on the advice given by BEIRG before making any decisions.

Many thanks for your time.

Kind regards,

Gareth Sizer
